## JSON Extract Details

### JSON Extract Details

#### Extract Data Source:

The extract queries the `LANDING\_MODULE.BLUE\_COMPASS\_AGGREGATE\_SNAPSHOT\_EVENT\_MOST\_RECENT` dynamic table, which contains the most recent version of each aggregate by key. Only records that have event created timestamp greater than the last successful extract will be selected and included in the file.

**JSONL Record Structure:** Each line in the extract file contains one JSON object with this structure:

```
```json
{
  "aggregate_name": "person|organization|case-note|...",
  "operation_category": "Creation|Operation|Deletion",
  "event_created_timestamp": "2025-11-01T10:14:30.320Z",
  "model": { /* Aggregate-specific data structure */ }
}
```
```

#### Extract Field Descriptions:

- aggregate\_name: Type of aggregate (person, organization, case-note, etc.)
- operation\_category: Type of change
  - Creation: New record
  - Operation: Update to existing record
  - Deletion: Record deleted (model will be empty)
- event\_created\_timestamp: When the change occurred (ISO 8601 format)
- model: Contains the business data for the aggregate (structure varies by aggregate type)

#### Processing Notes:

- Each aggregate key appears only once (most recent version)
- Deleted records have empty `model` objects

#### Error Handling:

- Only successful extracts will be delivered.

#### Data Retention:

- Extract files are retained for 90 days
- Historical extracts available upon request

#### OpenAPI Specification:

<https://widhs-uat-carity.feisystemsh2env.com/api/v1/api-doc/swagger/index.html>

SAS would only need the GET methods that accept a GUID key parameter

## Aggregate List

For Reference Only - This is a list of all Aggregates.

This list will be refined to include only Aggregates that will be included in the interface (TBD)

| Module                       | Aggregate                          |

| What is the file naming convention? (Ideally all files will have CCYYMMDD_HHmm as part of the file name) | blue_compass_extract_YYYYMMDD_HHMMSS.jsonl |

Business Rules

| BR #       | Description                                                                                                                                                                                                              |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BR-D10-001 | Approximately 50 modules and 150 aggregates (subject to change) exist in the Snowflake database. The list of Aggregates that will be sent in the interface will be defined in the "Aggregate List" tab of this document. |
| BR-D10-002 | Future changes that affect the data structure will be communicated via release notes.                                                                                                                                    |
| BR-D10-003 | The weekly file will include adds updates deletes since the previous file was generated.                                                                                                                                 |
| BR-D10-004 | When an aggregate instance is updated, the whole aggregate is included as an update.                                                                                                                                     |
| BR-D10-005 | Extract based on Event_Created_Timestamp fields to identify changes since last extract.                                                                                                                                  |
| BR-D10-006 | A single MOST_RECENT table contains latest state of all aggregates.                                                                                                                                                      |
| BR-D10-007 | Each aggregate key appears only once in MOST_RECENT table and is never reused.                                                                                                                                           |
| BR-D10-008 | JSON Structure: Each object contains 5 properties: "event", "model", and "pipeline", "aggregate name" and "created timestamp".<br><i>Note: See the 'JSON Extract Details' tab of this document</i>                       |
| BR-D10-009 | Deletion Identification: Records with operationCategory = "Deletion" indicate deleted aggregates. Deleted aggregates will never be "undeleted".                                                                          |
| BR-D10-010 | System Timestamps: Created/updated timestamps stored and returned in UTC.                                                                                                                                                |
| BR-D10-011 | Business dates stored in original time zone without conversion (for example Appointment dates).                                                                                                                          |
| BR-D10-012 | Pipeline loadTimestamp tracks when data entered Snowflake.                                                                                                                                                               |
| BR-D10-013 | The JSONL file will not be compressed.                                                                                                                                                                                   |

| R385                 | Solution must include various data exchange methods as necessary to support program-specific business needs.                                                                                                                                                                                                                                                                       |                    |
| R386                 | Solution must allow for import and integration of data from multiple data sources to support program-specific Care Management System rules.                                                                                                                                                                                                                                        |                    |
| R388                 | Solution must include matching logic that uses multiple key identifiers when integrating with other data sources.                                                                                                                                                                                                                                                                  |                    |
| R389                 | Solution must allow for the export of data to the Electronic Data Warehouse/Data Analytics and Reporting (EDW/DAR) solution.                                                                                                                                                                                                                                                       |                    |
| Exhibit J            | 3. Enterprise Data Warehouse/Data, Analytics and Reporting Module (EDW/DAR) includes the following<br>a. Individual Support and Service Plan (ISSP) Information;<br>b. Employment Information;<br>c. Grievance/Appeals Information;<br>d. IRIS Self-Directed Personal Care (SDPC) Information;<br>e. Participant Demographic Information; and<br>Long Term Care Needs Information. |                    |
