Context

Item Description	Details
Purpose of this interface	To transfer FSIA Adult Functional Screen Data to Blue Compass.
External system that Blue Compass will interface with	FSIA
Interface Direction (Inbound/Outbound/Both)	Inbound
Transfer Protocol (Webservice, SFTP, etc.)	SFTP
Where is the file sent to or picked up from (End-point or Landing Zone location URL)?	Gainwell Connect SFTP
Connectivity Protocols/Encryption/Authentication (VPN Tunnel, SSL Certificate swap, etc.)	SSL Certificate swap
File Type (xml, .csv, delimited flat file etc.)	.txt
Frequency	Daily (including weekends and holidays)
Timing Considerations (e.g. Day of the week and/or time of day files will be sent or available for pickup), or (When files are not available e.g. system maintenance windows, etc.)	10:00 P.M CST
Retry procedure for file expected but not (received/available) or otherwise successfully delivered.	Files will remain on the SFTP site for a standard amount of time for FEI to retrieve if needed.
For inbound, what field(s) are used to match to data in Blue Compass?	Medicaid ID
Is every file a full file (reconciliation), or a delta? If a delta, will full files occasionally be sent/received? If so, how often?	Delta (every screen record is a complete record, but only new/updated screens are included in the file).
Is there a field that represents the last time a row was edited, either a date or a datetime?	No
How are deletions handled? That is, if a data was sent previously but is no longer valid.	n/a
How are updates handled?	Updates will be a full replacement screen record.
If there are multiple files in the interface: What field(s) are used to link them together? If there is an update in one file, will all the matching records be updated as well? For example, when a person's address changes will the update record include only the new address, or will it include a refresh of all of the person's addresses, or a refresh of all of the person's information?	n/a
What is the file naming convention? (Ideally all files will have CCYYMMDD_HHmm as part of the file name)	CAR-CMM-Adult_FS_Details-D- YYYYMMDD_HHMMSS_MMM.txt

Business Rules

BR #	Description	Source Notes
BR-D12-001	If no LTC Needs Assessment custom form instance exists for the participant's case, create a new form instance in "In Progress" status and populate it with the inbound FSIA data.	FEI Design meeting 2026-04-20
BR-D12-002	If an LTC Needs Assessment custom form instance exists for the participant's case in "In Progress" status, update the existing form instance with the inbound FSIA data (overwrite all FSIA-populated fields; fields not mapped from the FSIA file are not modified).	FEI Design meeting 2026-04-20
BR-D12-003	If all existing LTC Needs Assessment custom form instances for the participant's case are in "Completed" status (none in "In Progress"), create a new form instance in "In Progress" status and populate it with the inbound FSIA data. The completed instance(s) are not modified.	FEI Design meeting 2026-04-20
BR-D12-004	If both an "In Progress" and a "Completed" LTC Needs Assessment instance exist for the same case, apply BR-D12-002 (update the "In Progress" instance). Do not create a new instance.	FEI Design meeting 2026-04-20
BR-D12-005	Each inbound FSIA record must be matched to an existing person in Blue Compass by Medicaid ID (MAID_NBR). The matched person must have an active case, because the LTC Needs Assessment custom form is a case-level form.	FEI Design meeting 2026-04-20
BR-D12-006	If the inbound Medicaid ID matches a person in Blue Compass but the person has no active case, skip the record and include it in the error report with the Medicaid ID and reason "No active case."	FEI Design meeting 2026-04-20
BR-D12-007	If the inbound Medicaid ID does not match any person in Blue Compass, skip the record and include it in the error report with the Medicaid ID and reason "No matching person." Note: FSIA may send functional screen data for people who never enroll in IRIS; these records are expected and should not generate a system error.	FEI Design meeting 2026-04-20
BR-D12-008	If the inbound Medicaid ID matches a person with multiple active cases, use the case associated with an active IRIS program enrollment. If no single IRIS enrollment distinguishes the cases, include the record in the error report with the Medicaid ID and reason "Multiple active cases — unable to determine target case.".	FEI Design meeting 2026-04-20
BR-D12-009	When creating a PersonEmployment record, build the Note field by concatenating non-empty values in file field order, separated by a Semicolon: (1) WKSHP_EMPL_FLG = "Y": "Workshop Employment"; (2) INDV_INT_WORK_CMNY_CD = "Y": "Interest in Working in Community"; (3) HOME_EMPL_FLG = "Y": "Home Employment"; (4) EMPL_ASST_CD: always append with label prefix (000 = "Need for Assistance to Work: Independent", 001 = "Needs help weekly or less", 002 = "Needs help every day", 003 = "Needs continuous presence", 004 = "Not applicable"; any other value including blank/spaces = do not append). If all flags are "N" and EMPL_ASST_CD produces no line, set Note to null.	Care Management - Data Conversion and Interface Meeting 2026-04-29
BR-D12-010	An error report shall be generated after processing each inbound FSIA file. The error report will contain a row for each record that fails a required business rule, with the Medicaid ID and error description.	D06 BR-D06-016 pattern
BR-D12-011	At go-live, FSIA will perform a one-time transfer of functional screens with eligibility calculated during the preceding 12 months. Blue Compass will process this initial file using the same logic as the daily files.	Deloitte FSIA ICD
BR-D12-012	When the inbound FSIA file contains only a header record with a detail record count of zero, Blue Compass will process the file without error. No form instances are created or updated. This is expected behavior when no functional screens were calculated on a given day.	Deloitte FSIA ICD
BR-D12-013	If the FSIA batch job fails, untransferred screens will be included in the following day's file. Blue Compass will handle receiving screens from prior days.	Deloitte FSIA ICD

Error Handling

Requirements

Requirement Tracking		
Requirement ID	Description	Traceability Notes
R370	The Solution data exchanges must comply with CMS security and HIPAA transaction standards.	
R385	Solution must include various data exchange methods as necessary to support program-specific business needs.	
R386	Solution must allow for import and integration of data from multiple data sources to support program-specific Care Management System rules.	
R388	Solution must include matching logic that uses multiple key identifiers when integrating with other data sources.	
R437	Solution must allow for the import from other data sources to complete the participant plan information.	
R455	Solution must automate participant authorization changes that are triggered by program-specific events, including but not limited to Participant case changes, Participant eligibility and functional screen changes, Provider changes, reference data changes and service rate changes as approved by DHS.
